

# TRACING THE GROWTH OF GLOBAL COMMUNITY

## A POPULATION FORECASTING

### 1.INTRODUCTION:

#### 1.1 OVERVIEW:

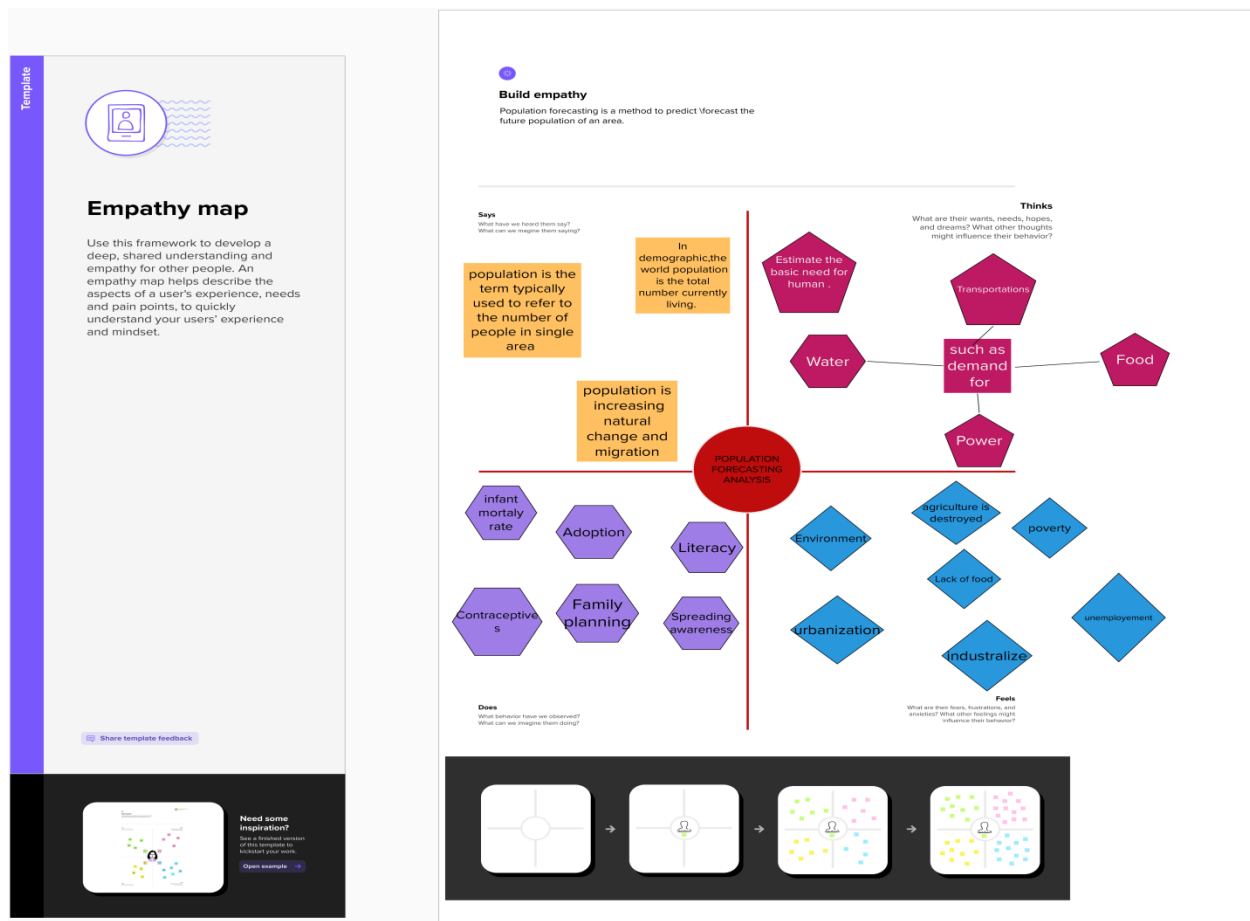

Population forecasting is the method of determining the expected population for a particular design period of a water supply system with the help of the study and analysis of future events and available records.

#### 1.2 PURPOSE:

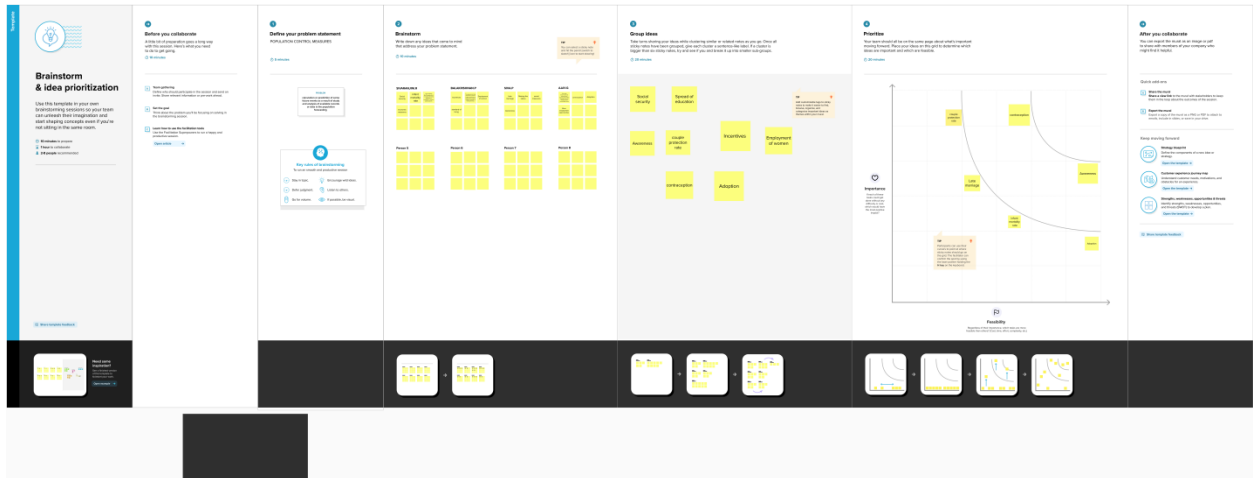

- Estimate the basic need for human, such as demand for food, water, power, transportations.
- Plan constructions such as housing, highways etc
- Basically, there are three techniques for population projection: Mathematical Method, Economic Method and Cohort Component Method.
- Mathematical method is frequently used for the estimation of population. It is done for short period i.e. less than 10 years
-

## 2.Problem Definition &Design thinking:

### 2.1 Empathy map:

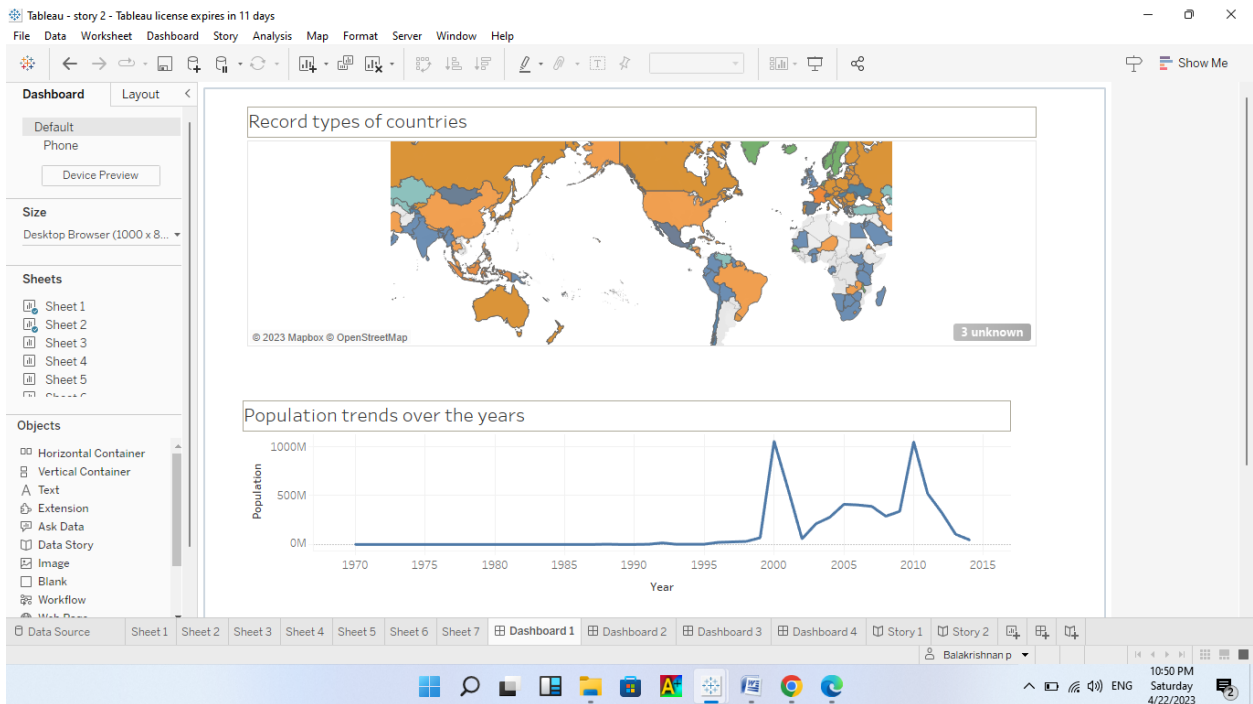

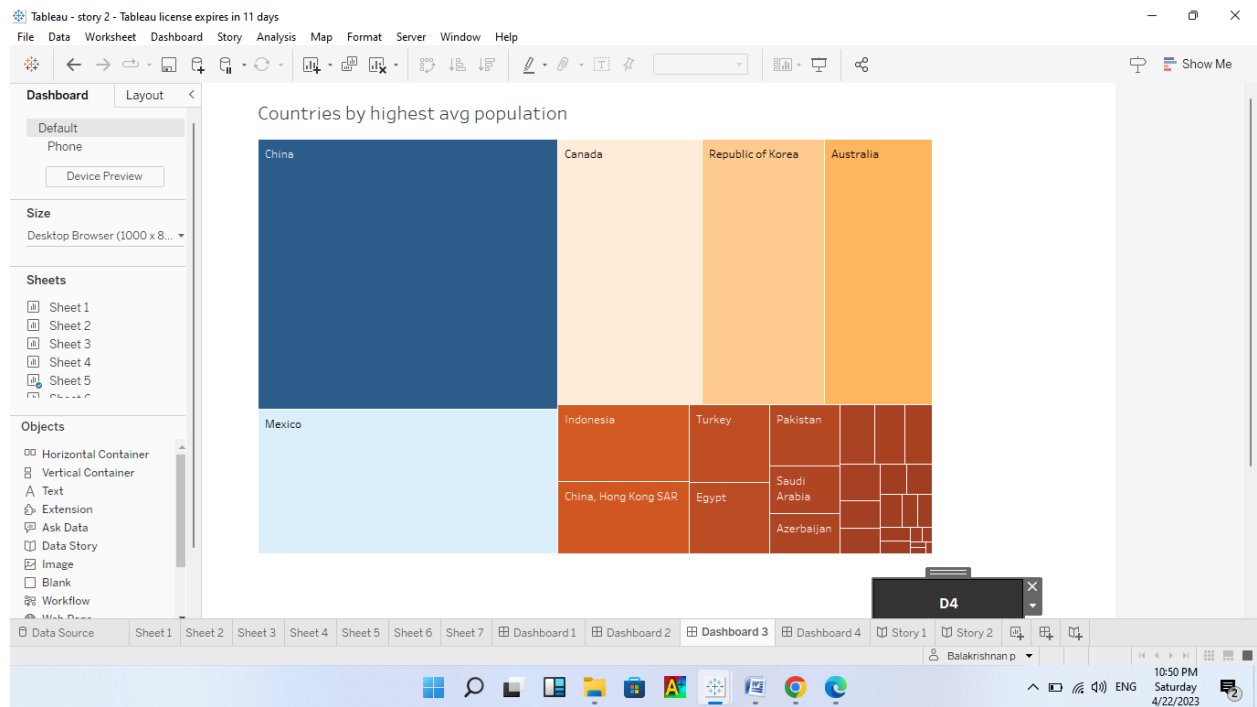

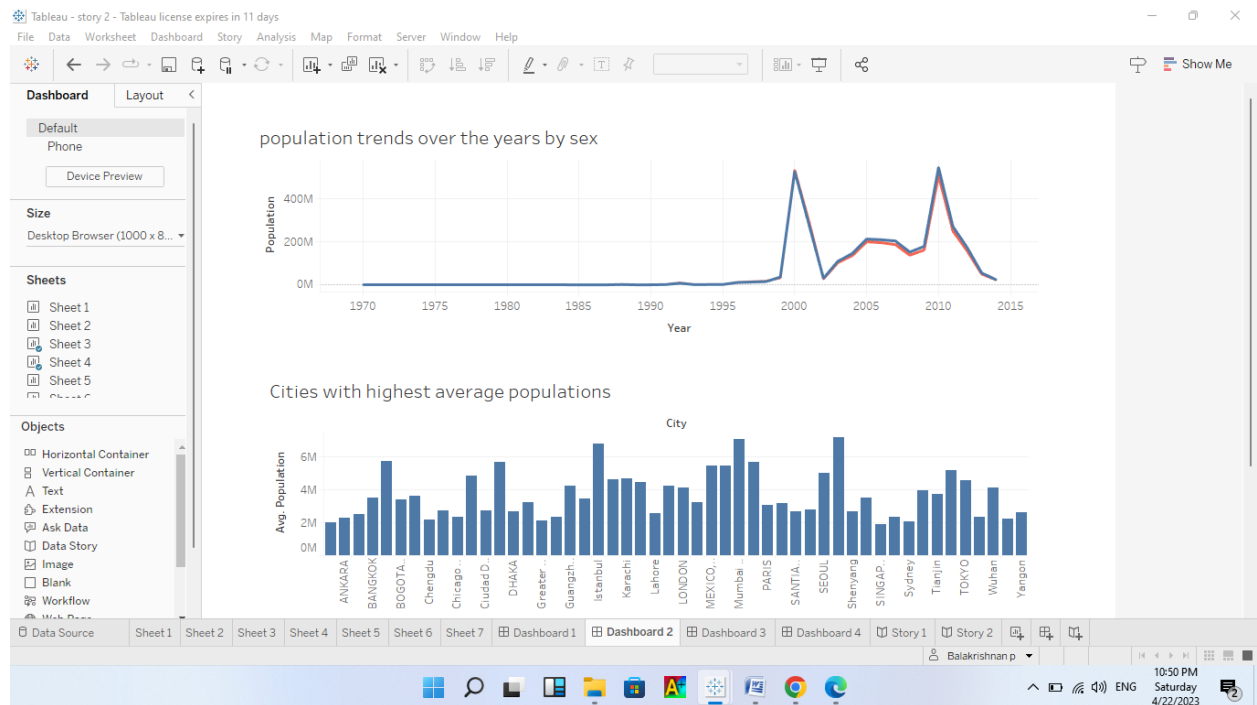

### 2.2 Ideation & brainstorming map

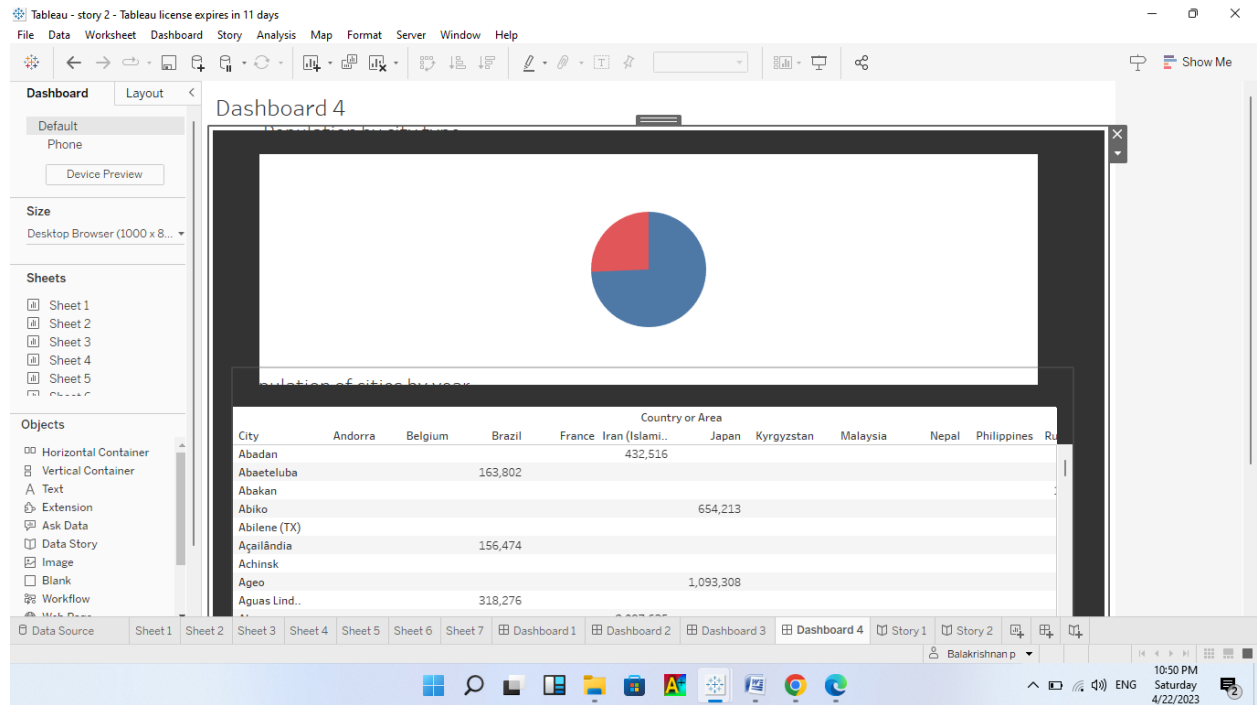

### 3 Result:

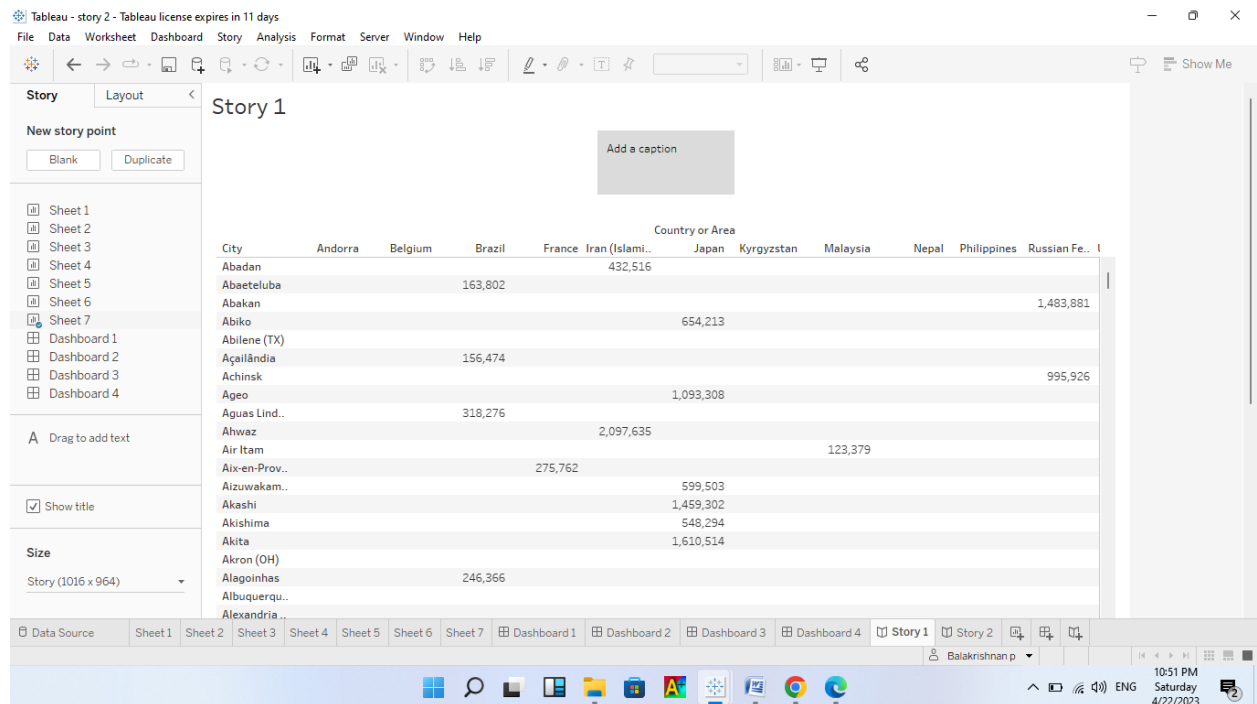

#### 3.1 Dashboard

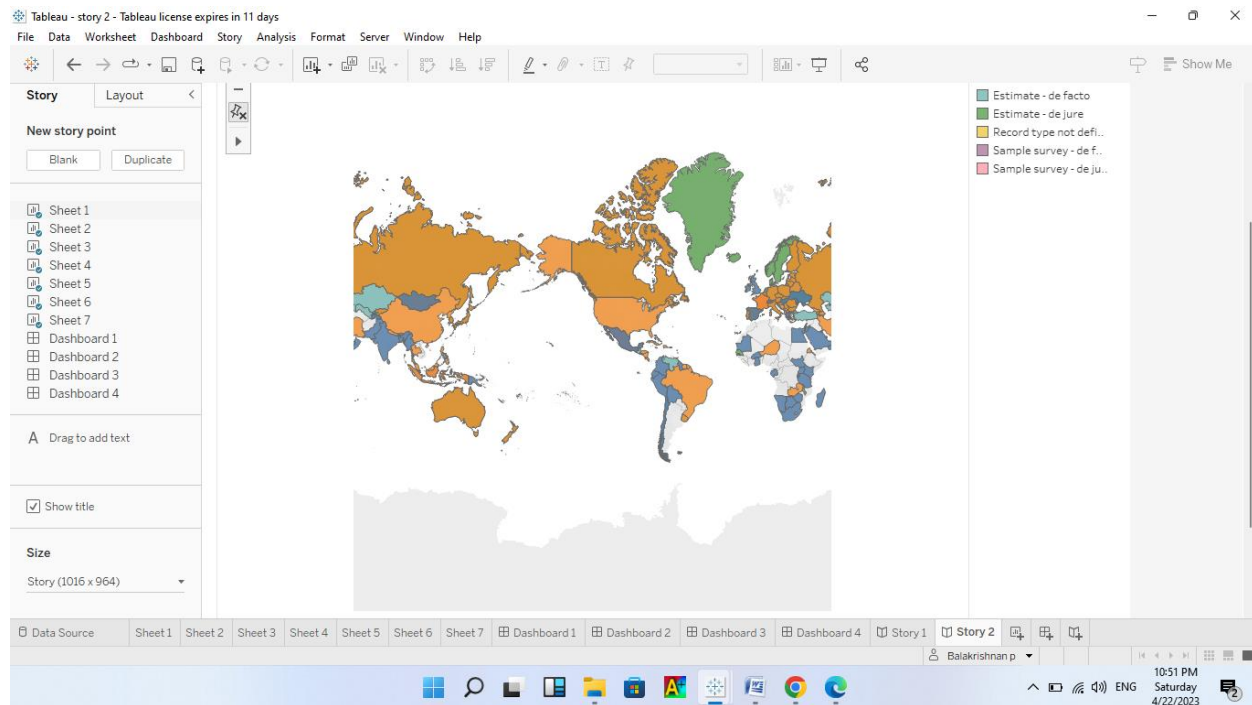

## 3.2 Story

## 4.ADVANTAGES & DISADVANTAGES:

### ADVANTAGES;

More people leads to greater than human capital

Higher economic growth

Economic of scale

The efficiency of higher than population density

The improved demographic structure of society

Critical mass

### DISADVANTAGES;

Cost to the environment

Congestion

Water shortages

Generating unsustainable waste

## 5.APPLICATION:

There are some applications associated with population growth, including, human evolution studies, the population growth is helped to study and observe the advancements in both anatomy and physiology. A growing population can be a result of many advantageous or beneficial traits or characteristics.

## 6.CONCLUSION:

The Earth's current population is almost 7.6 billion people, and it is expanding. It is expected to surpass 8 billion people by 2025, 9 billion by 2040, and 11 billion by 2100. The population is quickly increasing, far surpassing our planet's ability to maintain it, given existing habits

## 7.FUTURE SCOPE:

The UN Population Division report of 2022 projects world population to continue growing after 2050, although at a steadily decreasing rate, to peak at 10.4 billion in 2086, and then to start a slow decline to about 10.3 billion in 2100 with a growth rate at that time of -0.1%.
